

Client Server Architecture

The client communicates with the server over HTTP. The application server processes requests, accesses the database when required, and returns a response to the client.

Figure 1: Client-Server Architecture

HTTP Status Codes

The server returns the following status codes.

200	200 OK	OK
404	404 Not Found	Resource not found
500	500 Server Error	Internal error

User Login Flowchart

The login procedure is described below.
